

i am writing this letter in support of xm radio and its ability to offer its subscribers value added services like weather and traffice updates. satellite radio has provided quality programming to its subscribers and i'm sorry that upsets the local broadcasters who would rather lobby policymakers to stop satellite radio rather improve their product. the only way to for any product to improve and grow is by competition. the focus of the industry should be the quality of the product delivered to the consumer, not that a certain group is threatened by the emergence of a new competitor.

please focus on mopre important issues with our country's safety, economy, labor market, etc., etc., etc.
